

FeenPhone

FeenPhone has been tested on Windows 7 (32-bit and 64-bit), Windows 8 and Windows 10. It works well on all. It even works on Vista. We're running it from our radio network on Windows Server 2012. It does *not* work on XP or any Windows version before Vista. It will run on any Windows version from Vista forward.) If you want to run FeenPhone on a Mac, read [this](#). Or [this](#). And someone is working on a Linux version.)

Read [the Full Manual](#) or at least the [Quick-Start guide](#) for info on how to set up and use FeenPhone. Using FeenPhone is not difficult, but it's a bit different from many programs. I CANNOT STRESS THIS ENOUGH. NO MATTER HOW TECH-SAVVY YOU ARE, THIS PROGRAM WILL LIKELY NOT WORK FOR YOU UNLESS YOU READ THE MANUAL. Especially the part about completely exiting Skype before using FeenPhone, and the part about having a port forwarded before you try to use FeenPhone. And the part about that you MUST use headphones with FeenPhone.

If you had another version of FeenPhone installed, uninstall it first before installing this version.

DOWNLOAD FeenPhone 2/25/15 beta. Click the Feen bird to download:

Version name: beta v0.2.5533.39689

File name: FeenPhone_Setup_2_25_15.msi

MD5 Checksum: 077098fa36abbc6c44dfd21994b18a0f

Release date: 2/25/15

Subscribe to [our RSS feed](#) to stay informed of news and new, better versions.

Read the [20-Minute Audio School](#) for info on how to get the best spoken collaborative audio in the world.

FeenPhone is currently Windows only. There is no Linux, Mac or Android version yet. If you want one, [make one](#). Please let us know if you do (or if you make improvements to the Windows code) by posting a comment below.
